

# UCL Network Phase 1 IOT web site design

The **UCL Network** is a dedicated smart IOT peer to peer network with decentralised data storage and communications that provides a **SOLID** , **SAFE**, secure, efficient, low cost infrastructure for the smart city and industry revolution

## Unidata Community*Link* Secure Access For Everyone

Rather than using data centers and servers which are prone to data theft and surveillance , the [SAFE network](#) uses advanced peer to peer technology combined with the [SOLID platform](#) ability to decouple content from the application itself provides the IOT revolution with a solution to its localised data ownership, sharing, value exchange, security, risk and liability needs to support and closed loop automation within a decentralised autonomous network

### Access Users

[Workstreams](#) to establish customised Access user peer templates

### Products

Smart Citizens  
[Smart Community](#)  
Smart Industry
